SUMMARY

Software Engineer with 5+ years of experience building scalable full-stack systems and event-driven architectures using Node.js, Spring Boot, and Ruby on Rails. Proven track record of improving performance (~30%) and driving revenue growth (~15%). Strong product mindset with experience influencing product decisions, collaborating cross-functionally, and building real-world solutions like Pain Signal and AI-powered Ads Manager. Forward-thinking engineer experienced in leveraging AI tools to enhance development and product outcomes.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Frontend: React, Next.js, Angular

Backend: Node.js, Spring Boot (Java), Ruby on Rails

Databases: MySQL, PostgreSQL, MongoDB

Concepts: Event-driven systems, API scaling, concurrency handling

Tools: AWS, Docker, CI/CD, Git

EXPERIENCE

Software Development Engineer – DeleteMe (Sep 2023 – Present)

- Led and implemented key parts of full-stack features in collaboration with product and design teams, improving performance by ~30%
- Designed and implemented subscription plans and pricing logic, contributing to ~15% revenue growth
- Led migration of a browser extension to an event-driven architecture, reducing load time by ~25%
- Designed AWS-based CI/CD pipelines using Docker, improving release reliability and deployment consistency
- Implemented SSO using AWS Cognito (OAuth/SAML) and acted as primary point of contact for enterprise customer issues, supporting CSMs and influencing resolution strategies
- Regularly consulted by product managers to influence feature decisions based on strong product and system understanding

Full Stack Developer – Raja Software Labs (May 2021 – Aug 2023)

- Built scalable backend services across Node.js, Spring Boot, and Ruby on Rails, improving system reliability

- Developed high-performance React and Next.js applications with SSR, improving load time by ~20%
- Built internal tools end-to-end, improving team efficiency by ~25%

Full Stack Developer – Evidev LLP (Oct 2020 – Apr 2021)

- Designed REST APIs and reusable UI components, reducing development time by ~20%

PROJECTS

- Pain Signal: Built a customer support tool that detects user issues in real time and surfaces them on dashboards, with AI-driven decision support for product improvements
- AI Ads Manager: Developed a Meta Ads optimization tool that improves CTR, budget allocation, and campaign performance using AI-driven insights

EDUCATION

B.Tech in Computer Science – Heritage Institute of Technology
